

PowerTour RV Solar Power Kit

The PowerTour RV Solar Power Kit provides exceptional battery charging capability. Installing in just minutes, the constant charge to the RV battery offsets all parasitic power loss that robs the battery of precious power. Extends battery life as much as 50% and allows RV amenities to remain turned on, even when direct power is unavailable.

- No downtime - the battery is ready when you are
- Constant Charging - when the sun is out the battery is being charged - which means longer battery life
- More battery run time - up to 33% more run time
- Easy to install with no holes to drill into the RV roof - no leaks, just peel the backer and stick securely to the RV roof
- Very durable and entirely weatherproof - rocks, hail, rain and low hanging branches pose no threat - the solar still operates even if punctured*
- Available in two power options to meet power needs - 42 Watt and 60 Watt - and comes complete out of the box.

- Run the refrigerator
- Run fans
- Run lights
- Run the power jack to activate the power slider
- Run smoke detectors
- Run clocks

The PowerTour RV Solar Power Kit easily offsets the power required to run common appliances without direct power

Specify either:

RV15-2700 - 42 Watt - 26.14" x 60.81"

OR

RV15-3900 - 60 Watt - 26.14" x 86.05"

Both kits include: charge controller, 15' extension with connectors, 3'"pigtail" with connectors, and wire placement kit (8 cable tie mounting bases and zip ties)

"The purchase of my new PowerFilm solar panel has provided us with numerous benefits, as advertised. I was amazed how easy it was to install and it's ability to keep my battery charged at all times so that we have full power the minute we hit the campground to set up. I like the freedom it's given us to explore more remote locations and not worry about my battery." - Chris, Iowa

* Punctures will affect the solar panel's ability to produce power (dependant on severity of puncture) and affect the panels ability to withstand water.
